View SmartProtect™

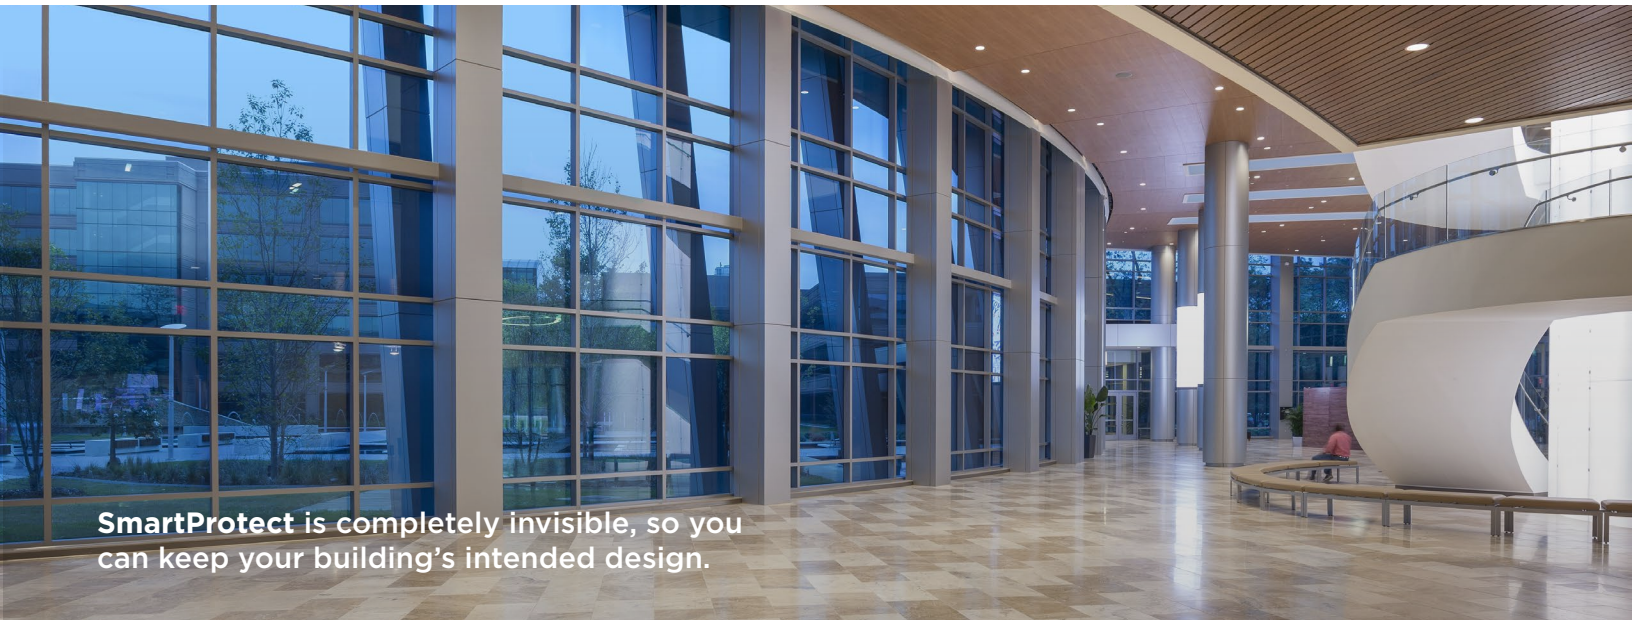
Protect your building and assets without false alarms.

According to the FBI, hundreds of thousands of commercial burglaries occur each year, leading to billions of dollars in losses. That is why protecting your property should be of the highest importance. There are a variety of ways to secure these potential entry points. The most popular choice is to install glass break sensors, which detects the sound or vibrations of glass breaking and sends alerts to notify you of the intrusion. While glass break sensors are widely used in the industry, they have been known to result in false alarms – which contributes to added costs and hassle for your business.

There Are No False Alarms

SmartProtect only sends alerts when the electrical signal running through the glass is interrupted

100% coverage of all glass surfaces, with no added sensors required.



SmartProtect is completely invisible, so you can keep your building's intended design.

The Product

SmartProtect is available as an add-on feature with your View Dynamic Glass installation

Fortunately, there is a better way. Introducing View SmartProtect, the industry's first perimeter intrusion detection solution offering 100% coverage of all glass surfaces, with no added sensors required. SmartProtect is available as an add-on feature with your View Dynamic Glass installation, and offers several key benefits:

↘ Say Goodbye to False Alarms. **View only sends alerts when the electrical signal running through the glass is interrupted, so there are no false alarms.**

↘ Saves Cost, Reduces Hassle. **No additional sensors mean no expensive installation or maintenance requirements. Once SmartProtect is activated, alerts are sent to you by text, voice, or email.**

↘ Keeps Your Building Beautiful. **SmartProtect is completely invisible, so you can keep your building's intended design.**

↘ 24/7/365 Monitoring and Protection. **Relax knowing we've got your back – you'll be alerted when a glass break occurs. You can easily configure the notifications by using the View Building Manager web dashboard.**

How It Works

1

Smarter Detection

When the glass breaks, notifications are sent out to the responder team

2

Acurate Alerts

You are immediately notified with the details: location, zone, and exact time of the breakage

3

Easy Replacement

Your View rep will confirm the glass breakage and coordinate the replacement

Simple Activation

1. Activate License

After View Dynamic Glass is fully commissioned on your site, you can purchase and activate a SmartProtect license in the View Building Manager web dashboard for your site. View will activate your site and help you set it up for your use.

2. Setup SmartProtect Responder Team

Once the settings are complete, you can easily create the SmartProtect Responder Team within the View Building Manager web dashboard. The SmartProtect responder team allows you to designate up to 5 people who will be notified of the glass breakage through mobile phone, SMS and e-mail. We are happy to help you walk through the process.

That's it! Once the setup is done you can sit back and relax and let SmartProtect do its job.
